# DMX512 DECODER

## User's Manual

**(Please read this manual carefully before use)**

## Forward

Thanks for choosing our DMX Decoder. Before installation and usage, we strongly recommend you to read through this manual carefully.

## After-Sales

From the day you purchase our products within a year, if being used properly in accordance with the instruction, and quality problems occur, we provide free repair or replacement services except the following cases:

1. Any defects caused by wrong operations..
2. Any damages caused by inappropriate power supply or abnormal voltage.
3. Any damages caused by unauthorized removal, maintenance, modifying circuit, incorrect connections and replacing chips.
4. Any damages due to transportation, breaking, flooding water after the purchase.
5. Any damages caused by earthquake, fire, flood, lightning strike etc force majeure of natural disasters.
6. Any damages caused by negligence, inappropriate storing at high temperature and humidity environment or near harmful chemicals.
7. Product has been updated.

## Safety warnings

1. Please don't install this controller in lightening, intense magnetic and high-voltage fields.
2. To reduce the risk of component damage and fire caused by short circuit, make sure correct connection
3. Always be sure to mount this unit in an area that will allow proper ventilation to ensure a fitting temperature.
4. Check if the voltage and power adapter suit the controller (**please select DC5-24V power supply with constant voltage**)
5. Don't connect cables with power on, make sure a correct connection and no short circuit checked with instrument before power on.
6. Please don't open controller cover and operate if problems occur.

The manual is only suitable for this model, any update is subject to change without prior notice.

---

## Function Brief

Thanks for choosing DMX512 Decoder, the Decoder is designed via advanced microchip technology to convert the universal standard DMX512/1990 signal into analog signal, it allows user to choose 1~3 output channel, 256-level brightness control, max 512 output channels. This compact decoder connects to light console, analog device and various Led terminal products such as RGB Led lamps, RGB Led tubes, building lamps, LED wall washers or lighting and other compatible devices allowing its user to create endless possibilities of light shows.

### I . Product Specifications:

Input voltage	DC5V~DC24V
Max load current	5A/CH×3
Driving LEDs	75W/180W/360W(5V/12V/24V)
Output Scale level	256 levels
Input signal	DMX512/1990
Output signal	3 constant voltage channels
Output DMX Channel	3Ch or 4Ch
DMX512 socket	Standard ×LR-3R
Dimension	L125×W52×H40mm
Package Size	L135×W70×H50mm
Weight (G.W)	300g

### II . Basic Functions

- 1.) 256 steps of smooth brightness adjusting.
- 2.) User addressable DMX interface, with easy dip-switch settings and testing modes.
- 3.) High power output, 3 output channels.
- 4.) Over load auto protection.
- 5.) DMX pass through and in/out connector for daisy chain configurations.
- 6.) with 3 DMX addresses or with 4 DMX addresses

### III. Configuration Diagram

Input Port

Output Port

### IV. Decoder address setting

This decoder occupies 3 addresses, adopted Dip switch to set the address, the Dip switches from 1 to 9 are a kind of binary value coding switches used to set DMX512 initial address code, the correlative bits is the 1-9 bits of the DIP switch, the 1<sup>st</sup> bit is LSC, the 9<sup>th</sup> bit MSC, 512 addresses totally.

DMX512 initial address code is equal to the total amount of the Dip switches' number from 1 to 9, press Dip switch downward (ON: at position "1"), user can get the number of its position, if pressing upward (at position "0"), the number of its position is 0.

**Example 1: Set to 37**

Set the 6<sup>th</sup>, 3<sup>rd</sup>, 1<sup>st</sup> bit of the DIP switch downward to “1”, others to “0” (picture 1), the total sum from 1 to 9 is  $32+4+1$ , so the DMX512 initial address code is 37.

Accept DMX512 signal only when the DIP switch FUN=OFF (at position “0”)

Picture 1

**Example 2:**

Set DMX512 original address code as 328: Set the 9<sup>th</sup>, 7<sup>th</sup>, 4<sup>th</sup> bit of the DIP switch downward to “1”, the rest to “0” (as picture 2), the total sum from 1 to 9 is  $256+64+8$ , so the DMX512 original address code is 328.

Picture 2

**V. Instructions for other functions****1. Testing function:**

The 10<sup>th</sup> DIP switch is FUN, acting as the function key.

DMX512 Decoder works when FUN is at OFF, receiving DMX512 signals.

Decoder testing mode works when FUN is at position "ON" as Picture 3:

SWITCH1—9 OFF: BLACK

SWITCH1 IS ON: RED

SWITCH2 IS ON: GREEN

SWITCH3 IS ON: BLUE

SWITCH4 IS ON: YELLOW

SWITCH5 IS ON: PURPLE

SWITCH6 IS ON: CYAN

SWITCH7 IS ON: WHITE

SWITCH8 IS ON: 7 COLOR JUMPING (8 SPEED LEVELS)

SWITCH9 IS ON: 7 COLOR SMOOTH (8 SPEED LEVELS)

Picture 3

## 2. Color jumping & color smooth

When decoder is at testing mode, DIP Switch 8 is at "ON", it's the 7

Color Jumping, when DIP Switch 9 is at "ON", it's the 7 Color Smooth, with 8 speed levels for each effect.

SWITCH 1—7 OFF: SPEED 0

SWITCH 1=ON: SPEED 1

SWITCH 2=ON: SPEED 2

SWITCH 3=ON: SPEED 3

SWITCH 4=ON: SPEED 4

SWITCH 5=ON: SPEED 5  
 SWITCH 6=ON: SPEED 6  
 SEITICH7=ON: SPEED 7

Picture 4

As Picture 4. When several DIP SWITCH at “ON” at the same time, comply with the largest value switch, the testing function is when FUN=ON, DIP SWITCH 8 & 9 for the color changing function, DIP SWITCH1–7 for the speed function, comply with the largest value switch , SPEED 7 is the fastest speed.

3. Manual control mode:

In this mode, the dip- switch 10 is flipped to the “OFF” position. Flip the dip-switch 1-3 to set the intensity of Red LEDs, dip-switch 4-6 to set the intensity of Green LEDs and dip-switch 7-9 to set the intensity of Blue LEDs. Please refer to the following table for further information.

4. Note: Two versions for LT-8030 decoder, one has 3 dmx addresses, the other

has 4 dmx addresses.

### 3 DMX ADD Version:

The 1st address controls LEDs on CH1,0-255 steps of brightness.

The 2nd address controls LEDs on CH2,0-255 steps of brightness.

The 3rd address controls LEDs on CH3,0-255 steps of brightness.

### 4 DMX ADD Version:

The 1st address controls LEDs on CH1,0-255 steps of brightness.

The 2nd address controls LEDs on CH2,0-255 steps of brightness.

The 3rd address controls LEDs on CH3,0-255 steps of brightness.

0-127 of the 4th address controls the brightness, 128-255 for strobe

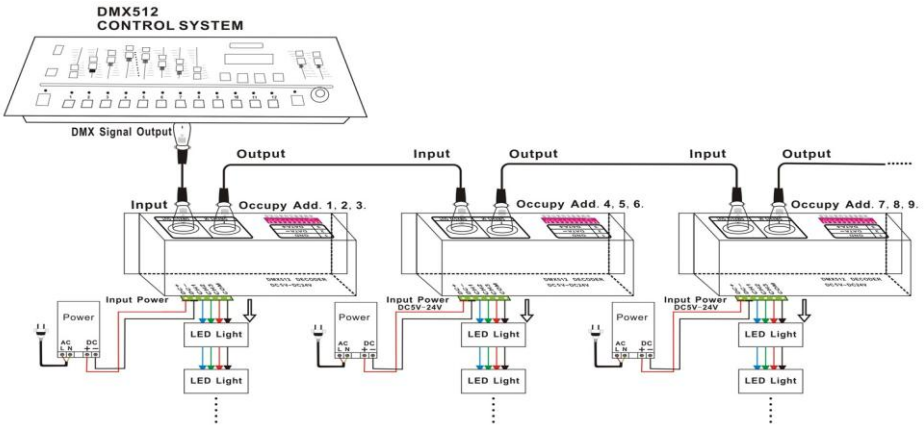

Dip-Switch Setting

Intensity	Red(SW1-3)	Green(SW4-6)	Blue(SW7-9)
0	000	000	000
14%	100	100	100
28%	010	010	010
43%	110	110	110
57%	001	001	001
71%	101	101	101
86%	011	011	011
100%	111	111	111

## VI. Conjunction Diagram

Each Decoder with one power supply

Or one power supply with multi decoders

**NOTE:** According to DMX512 protocol, in order to ensure a steady data transmission, you should add a **metalster**(Metal Thin Film resistor, 90-120Ω 1/4 W )at the end of each layout of DMX data cable(between Foot 2 and Foot 3, Data + and Data -), please also refer to your dmx console manual to select a correct resistor.
